GreenStar Reichhardt	Jayme Paquin Reichhardt Electronic Innovations Inc. 12 First Street South P.O. Box 117 Sabin, MN 56580-0117 Office: 218-677-1001 ext. 202 www.reichhardt.com	

Versatile worked with each one of these precision ag suppliers to validate the functionality of their system. This initiative, spearheaded by Versatile, ensures flexibility regardless of the precision ag choice of the customer. Each of these suppliers have prepared a auto steer kit compatible with the Versatile Universal Auto Steer option.

Installing GreenStar will require the dealer to directly contact Reichhardt.

Please see additional sheet for Reichhardt explanation on the operation of their system.

Subject: Reichhardt ISO Navigation Controller Utilizing GreenStar SF Guidance Components

Reichhardt System:

- Calculates based on the same destinations as the GreenStar system
 - This allows repeatability of GreenStar headings
- Guides the machine using GreenStar components
 - Note: Autotrac Activation is not needed
- Can display on multiple ISO VT's
 - GreenStar 2600/2630 (note: It displays as an upload icon in the ISO VT object pool)
- Steering method supported:
 - Strait track (storage capacity 200)
 - Circle pivot (storage capacity 50)
 - All the menu navigation and way-line entry of the system
- Steering method not supported:
 - No active curve
 - No I-steer function
 - Input/export feature for the Reichhardt way-lines
- Operates independently of the GreenStar system
 - Customer will manually need to enter store lines into Reichhardt UI
- Will utilize the correction that is unlocked in the receiver
 - WAAS, SF1, SF2, RTK
- On the Starfire ITC, and 3000 receiver will benefit from the integrated terrain compensation of the receiver when configured and calibrated on the tractor
- Calculations for heading and resolution match GreenStar therefore the lines are repeatable.
