\*\*Always refer to Pricelist/Product Sheets for each manufacturer's combine models specific requirements before conversion\*\*

Feb - 2016 Rev B

\*\*All Flex and Rigid headers have Hydraulic Centerlink and AHHC as standard equipment\*\*

**NOTE 1:** Not Factory Supplied as complete header for that combine series. Dealer assembly required

**NOTE 2:** B5004 is curved filler plate kit for narrow opening feeder NH CR combines. B5405 is a curved filler plate kit for wide opening NH CR combines. Plates are removed for use on NH CX or CaseIH combines

**NOTE 3:** All CNH share identical AHHC sensors and controls with the exception of some NH combines which require a 10 volt AHHC kit from MacDon (B5847). If changing combine voltage (5 volt vs 10 volt) kit may need to be installed/removed and potentiometer changed to correct voltage
