

## SUNNYBROOK LEXION IMPELLERS

- Available for both Narrow Body – 56" SBLX846 & Wide Body – 67" SBLX836.
- More weight to create better inertia.
- Staggered paddle design to dampen torque and tip material for better delivery to the rotors.
- All tools on the impeller are boronized for wear and are replaceable.
- The biggest feature is the cutting knife mounted dead center of the impeller, this does not allow material to get built up due to the fact that it can't decide which direction to go because the straw is equally spaced off center. It minimizes any plugging issues.
